EXPERIENCE

Strategic Systems International, Pakistan

2022 - Present

Senior Software Engineer

- Built and optimized full-stack applications using .NET 8, Angular, React, Next.js, TypeScript, and Python for high-impact German enterprise clients, including GN Audio, ROPA, and ASMPT.
- Improved system performance and scalability by implementing Elasticsearch sharding and replicas with Kibana visualization, integrating Kafka for real-time streaming (reducing processing time by 25%), and boosting throughput by 50% using Redis caching and Docker.
- Wrote comprehensive unit tests using xUnit and Moq, increasing code coverage upto 65% and improving code reliability, maintainability, and regression stability across releases by migrating legacy code to modern architecture.
- Implemented CI/CD pipelines with automated build, testing, and release strategies to enhance delivery efficiency, secured APIs with Azure API Management, and leveraging CosmosDB as the primary datastore; implemented 100+ user stories and resolved complex bugs, cutting downtime by 30% and improving user satisfaction.
- Mentored and upskilled new developers by conducting senior technical interviews and solely leading a self structured .NET + TypeScript + Git training program for 10+ fresh graduates, accelerating onboarding and improving team productivity.

Freelance

2019 - 2022

Full Stack Developer & Data Engineer

- Engineered AI-powered data scraping solutions and full-stack applications, boosting data retrieval accuracy and cutting client labor costs by 35% through automation with tools such as Beautiful Soup, Selenium, and Playwright.
- Gained hands-on experience in multiple codebases, where I troubleshoot, optimized, and delivered solutions in Next.js, TypeScript, .NET, and Python, both on the user-interface and backend.
- Developed high-performance data-driven systems, including algorithmic trading platforms leveraging PyTorch, Scikit-learn, and Pandas; built custom APIs and ETL pipelines that reduced data processing time by 50%, enabling advanced analytics and optimized decision-making strategies.
- Achieved Level 2 Seller status on Fiverr, delivering 100+ orders with consistent 5-star client reviews.

SKILLS

Software Development: .NET, Node.js, Flask, React, Angular, Next.js, Electron.js, NoSQL, SQL, Python, eel, HTML/CSS/Sass, Docker, Redis, Apache Kafka, Elasticsearch, Git, DBMS, Supabase, Web & Mobile Dev, Object Oriented Programming, Selenium, Beautiful Soup, Playwright, Puppeteer, Cheerio, Jupyter/Google Colab, Pandas, Amazon Web Services, Microsoft Azure

Programming Languages: C#, Typescript, Javascript, Python

CERTIFICATIONS

Amazon Web Services

Certified Cloud Practitioner

2026

RECENT PROJECTS

Blockchain based Digital Identity Management

- Engineered a decentralized identity solution on the Stacks blockchain to issue and verify tamper-proof digital credentials.
- Designed secure wallet-based authentication and smart contract interactions to enhance data integrity and trust.
- Strengthened credential verification reliability while reducing central dependency risks.

Technology: Blockstack.js, Node.js, Javascript, React, Hiro Wallet, MongoDB

IoT-based Data Dashboarding

- Developed a distributed data collection system for agricultural harvesting machines using CAN bus protocol, streaming telemetry data into Kafka pipelines.
- Implemented KPI computation services and real-time dashboards to monitor performance across multiple European regions.
- Optimized ingestion and search performance using Elasticsearch, Redis caching, and microservices architecture.

Technology: .NET 6, Microservices, Angular, Postgres, Redis, Kafka, Elasticsearch, Kibana, Glances, Azure DevOps

Odabash Catalog

- Designed and implemented a scalable Next.js inventory management platform handling multi-location stock with automated syncs from external systems.
- Built approval workflows, advanced filtering, buyers' matrix reporting, and export tooling (Excel, CSV, PDF) to support sales and compliance operations.
- Improved reporting speed and inventory accuracy through scheduled cron jobs, anomaly detection, and secure server-side actions.

Technology: Next.js App Router, Shadcn, Tailwind, Supabase, Vercel

Ranorex

- Extended an enterprise automation framework by integrating Azure DevOps APIs to synchronize test cases and automate reporting workflows.
- Built WPF-based tooling to streamline regression testing and reduce manual QA overhead.
- Improved pipeline visibility and traceability across CI/CD processes.

Technology: .NET Framework, WPF, Azure DevOps API

EDUCATION

Bachelor's Degree in Computer Science

2018 - 2022

CGPA: 3.2

National University of Computer & Emerging Sciences, Pakistan
